

# ZlideOn

PAT.PEND

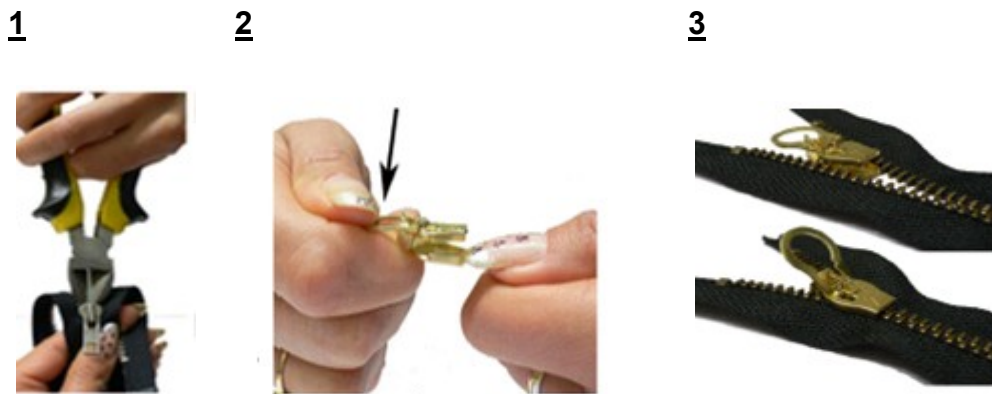

The innovative discovery of the **ZlideOn** gives us from now on the possibility to get zippers repaired within 3 seconds without replacing the entire zipper. Research shows that 80% of all zippers which break down are caused through failing of the slider. The slider becomes weak, breaks etc.

Up till today, if a slider breaks; we were forced to replace the entire zipper by removing the old one and place a new zipper. This odd job costs a lot of time, frustration and needs adroitness and skillfulness.

With the revolutionary **ZlideOn** this is history.

By using the **ZlideOn** we only have to remove the old slider and replace them with the matching **ZlideOn** and your zipper has been repaired. **ZlideOn** is available in 9 different colors, in more than 13 sizes and suitable for every zipper material; metal, plastic, coil and invisible coil. In short, for every zipper is a **ZlideOn** available.

1. Remove the old slider, simply by using a pair of cutting pliers.
2. To open the **ZlideOn**; push the lower part/jaw down with your thumb and push the puller backwards until it opens.
3. Place the open **ZlideOn** at the beginning of the zipper and press firmly together. Ready to use.
